New tech with the power to dent the universe

## LEVI'S COMMUTER X JACQUARD

This is probably the most hi-tech piece of hipster denim you'll ever set eyes on. We've seen fashionable wearable tech before - Lyle & Scott's bPay contactless jacket came to market about a year ago, looking great but lacking a little in the smarts department, other than a contactless-payment chip nestled within the sleeve. However, the Levi's Commuter X Jacquard (CXJ) takes the smart-clothing genre to another level.

Levi's isn't exactly well regarded for its tech-industry know-how, unless we're talking material enhancements like water-resistance, so the denim guru has brought in some help: namely, Google. The collaboration - a year-long deal - sees the Levi's Commuter Trucker jacket receive an upgrade in the form of Google's Project Jacquard, which infuses interactivity into the material. How so, you ask? Using conductive yarns, which allow Levi's to weave touch- or gesture-sensitive areas into the garment. The yarns are then attached to discreet embedded electronics, which, when hooked up to a phone, enable you to take calls, or listen to music, without having to touch your device - ideal on a bike.

The thing is, you'd never really know it - it looks like a regular Levi's jacket, and that's a good thing in our book.

# Meet the team

**Rob Carney****EDITOR**

A new iPhone 7 and Apple Watch Series 2 have been exciting Rob this month, but he's possibly a little more excited by his new Audeze SINE headphones. Look out for a review soon!

**Nick Odantzis****DEPUTY EDITOR**

Nick has been off to Photokina in Cologne, Germany this month to check out all the latest camera tech. Check out his review of Kodak's latest virtual-reality offering on p116.

**Claire Davies****ASSISTANT EDITOR**

Claire is getting ready for Christmas already - well, prepping T3's incredible gift guide (coming in issue 263), that is. She's also been testing the very latest in sleep tech.

**Paul Dimery****PRODUCTION EDITOR**

King of the words Paul has been so busy with this awards issue, we should've given him an award. He's also been playing with the BlackBerry DTEK50 (and is still confused by its name).

**Luke O'Neill****ART EDITOR**

Luke's been commissioning and designing our huge awards feature this month - over 50 pages of impeccably designed, award-winning goodness. Check out his work on p54.

**Dan Graham****EDITOR, T3.COM**

Dan had a Note 7 for a while, and luckily it didn't explode. He's looking forward to getting his hands on another one, but for the meantime the 256GB iPhone 7 Plus will have to do.

**Robert Jones****FEATURES EDITOR, T3.COM**

Rob continued his gaming journey (last month, he got the new Xbox) by getting his hands on the slim PlayStation 4. He's also been writing about the iPhone 7 - A LOT!

**Duncan Bell****LIFESTYLE EDITOR, T3.COM**

It's been T3 Awards all the way for Duncan this month, as he's been chairing the industry judging panel and interviewing one of the world's biggest superstars. Find out who on p62.

**Spencer Hart****MOBILE TECH EDITOR, T3.COM**

As well as reviewing the new iPhone 7 Plus for T3.com, Spencer found time to jump into the new Range Rover Sport SVR - a super-fast £90k beast. Find out what he thought of it on p122.

## LIFE'S BETTER WITH T3...

→ Tomorrow's Technology Today, to give T3 its full name, was launched in 1996 and has been helping readers select the right gadgets to improve their lives for nearly 20 years as a magazine (print and digital) and at T3.com. We've been at the heart of every shift in consumer

technology ever since - from DVDs and HD TVs to smartphones and virtual reality. But our mission has remained the same throughout: to help you live a better life through technology, and to filter the latest gadgets to ensure you only ever buy the best of the best.

# Editor's letter

Welcome to the tenth anniversary of the *T3* Awards. And this year, it's bigger and better than ever...

This month is a very special time for *T3* as we celebrate ten years of the *T3* Awards – widely known as the 'Oscars' of the gadget world. And I'm incredibly honoured to be bringing you this collectors' issue, showcasing the best tech and gadgets from the last year. We've covered every category that matters – from phones to laptops to cars and audio. And each of our winners is a class above the rest (but still, a huge round of applause to every product that's made our shortlist). We've also introduced a couple of new categories – namely, the Editors' Choice Award and Gadget of the Decade. The former has been decided by *T3*'s expert team of editors, and recognises a product under £500 that pushes boundaries and tech direction in new ways. The latter? Well, it speaks for itself.

But this isn't just about us – we couldn't have done this without you! It's thanks to your votes at [T3.com](http://T3.com) that we've come to our decisions about the best tech of the year. So thank you to all who voted. Also, a huge thanks to our media partners, our category sponsors Hive and Kodak, and our main sponsor EE. Enjoy our *T3* Awards spectacular, and here's to another great year of tech!

**Rob Carney, Editor**

[rob.carney@futurenet.com](mailto:rob.carney@futurenet.com)

[Tweet me @robcarney](#)

Discover more great ways to enjoy *T3*...

## Digital edition

The iPad edition of *T3* features a raft of fresh content, including video reviews and interactive articles. *T3* is also available on Android devices, and on your desktop via [Zinio.com](http://Zinio.com).

## Visit *T3*.com

We've overhauled *T3*.com – the best site for gadget news and reviews now has a great new look and is fully responsive, enabling you to enjoy it on any device.

## Key contributors

**Nicolas Dehghani, illustrator**

The supremely talented Nicolas is in charge of our Gadget Guru illustrations this month. Check out more of his stunning work at his site: [nicolasddd.tumblr.com](http://nicolasddd.tumblr.com)

**Chris Barnes, writer**

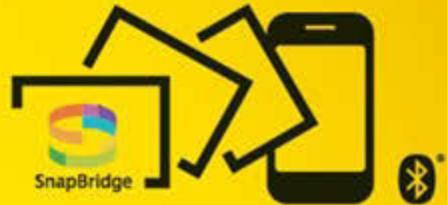

Drone expert Chris has been busy compiling a host of drone-photography kit, including the latest DJI Phantom, for a reader in need. Take to the skies with him in *We Can Build You*, on p32.

**Pete Travers, writer**

Keen golfer Pete has been fitted out with the latest club tech from TaylorMade this month. Can it make him play better, or will he still be bogeying? Find out in *Man Vs Tech*, starting on p108.

## Apple iPhone 7 & Watch Series 2

T3 gets up close and personal with Apple's latest kit. Are they worth the upgrade?

iPhone from £599; Watch from £269; [www.apple.com/uk](http://www.apple.com/uk)

The Apple iPhone 7 is a smartphone that is not designed to innovate but rather to iterate - and boy does it iterate on last year's iPhone 6s well. It's faster than before, thinner than before and - return to a smart glossy black colour scheme aside - offers some seriously nice refinements throughout.

Indeed, refinement is definitely a word that springs to mind when dealing with the iPhone 7. It is clearly an iteration of an existing design, almost being an iPhone 6s-s type device. For example, the antenna bands that partially defined the look of the 6s are now almost invisible, granting the phone a cleaner and slicker aesthetic. However, overall the design remains similar. This is no iPhone 3G to iPhone 4 style jump.

And, if we're being honest, that's a good thing. If it isn't broke then don't try and fix it. Instead look to how you can make it better and - crucially - more appealing to an even wider range of people. Apple makes very good smartphones and by refining an already high-level and super-approachable device, as well as introducing some welcome new features, they've gone a long way to doing that with the iPhone 7.

### 3.5mm begone

One of the most notable changes with the iPhone 7 is the removal of the headphone jack, with headphones now connected to the device either by Bluetooth or via the phone's Lightning port. Apple isn't the first company to make this decision, with Motorola removing it on its Moto Z handset earlier in the year. However, it is arguably the first major player to do so. The reasoning behind the removal is its impediment to producing thinner devices, with the 3.5mm jack essentially now getting in the way of design. This is understandable and, if we're being honest, a well-timed decision, as wireless headphones and wireless standards have now come of age.

To ease the transition to a jack-less device, Apple include a Lightning adapter for existing wired headphones with the iPhone 7. One issue with this is, however, is that it prevents you from charging the handset while you listen. A pair of wireless Bluetooth headphones are therefore not mandatory if you pick up an iPhone 7, but they're certainly useful.

Apple, as usual, is one step ahead in this department and has designed what it calls the 'W1 Chip'. This is a new chipset

## Vital stats

IP67

The iPhone 7 is rated IP67, meaning it's resistant to both water and dust

f/1.8

The new and improved aperture of the iPhone 7's 12MP camera

40 per cent

The speed increase delivered by the phone's A10 chip

326ppi

The iPhone 7 screen's pixel density

### SEVENTH HEAVEN

The latest iteration of the iPhone is all about refinement. And with more power than ever, it's a worthy upgrade, especially if you're coming from an iPhone 5s or 6

that can sit in pairs of wireless headphones and, essentially, solves a lot of the existing problems with Bluetooth cans. With the W1 Chip headphones or earphones can now be totally independent (not even connected together), while pairing is instantaneous and the connection offered is ultra-stable and requires little energy.

Apple's also introduced its AirPods, wireless earphones that not only make use of the whizzy new W1 Chip but also cost a pretty penny (£159).

#### Proof in the pudding

The new iPhone is also IP67-rated, which means that it is resistant to both water and dust, now features stereo speakers and its Home button has also been redesigned too. The Home button is now solid state, force-sensitive and boasts a revamped haptic engine that can be accessed by third party apps for special effects. Each of the above is a small but welcome improvement.

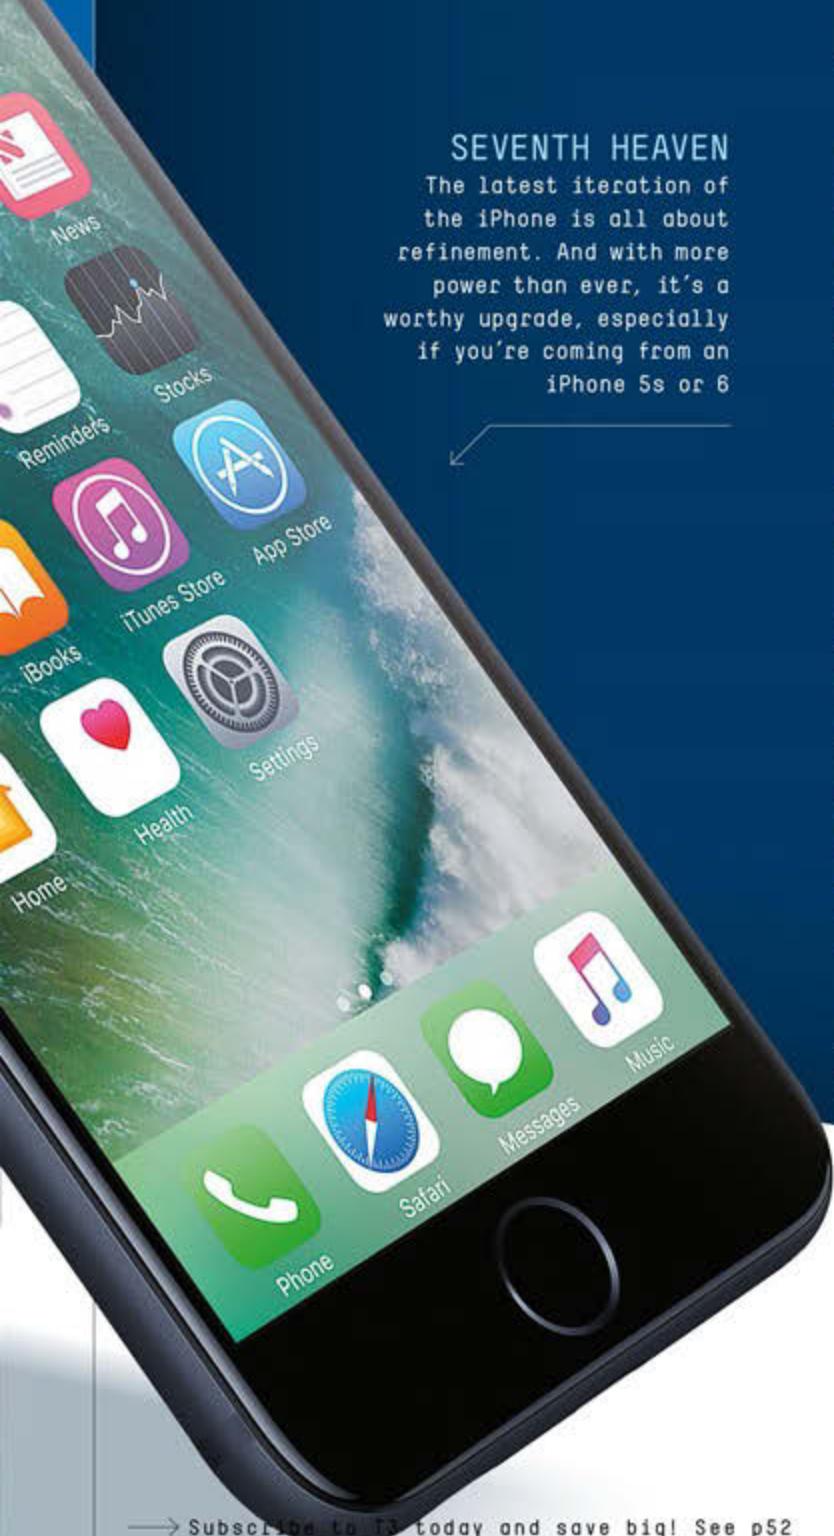

A much bigger change is the iPhone 7's new camera. The iPhone 6s had a 12MP, f/2.2 camera with phase detection autofocus but not optical image

stabilisation, which was reserved for the 6s Plus. The iPhone 7 fixes this, introducing stabilisation, an improved f/1.8 aperture and better low-light performance. There's a brand new lens, faster sensor and front-facing camera too, which is also now stabilised. And that's not even mentioning the new dual-camera setup on the iPhone 7 Plus.

Would we have liked the dual-camera setup on the iPhone 7? Yes. Yes we would. However, the refinements Apple has made on the iPhone 7's camera ensure that it's easier than ever to take good quality photos.

In terms of raw hardware, things have got bigger, faster and better. The dual-core, 1.8GHz A9 processor with six-core PowerVR GT7600 graphics from the iPhone 6s is now out, replaced with the new Apple A10 Fusion. The A10 packs in a four-core processor with two high-performance cores and two high-efficiency cores, with the former delivering a 40 per cent performance boost over the A9 chip. The results are impressive, with the iPhone 7 incredibly sharp and responsive while in use.

Storage is also up in the iPhone 7, with 32, 128 and 256GB options now available. Unfortunately, the new glossy black →

→ colour scheme is only available on the 128 and 256GB options though and, as we are now used to, these drive limits cannot be supplemented with a microSD card. Battery life has also been improved, with roughly two extra hours of usage time added per day.

#### Bright idea

The iPhone 7's display is similar to the iPhone 6s', with a 1,334 x 750 at 326ppi screen on offer. Once again it is an IPS LCD too, however, Apple has increased its brightness by 25 per cent and also given it a wider colour gamut. It looks good and is better than its predecessor, however it arguably still lags behind some of the high-end AMOLED Android displays on the market (think Samsung Galaxy S7).

All this hardware combines to power Apple's new operating system for the iPhone 7, iOS 10, which comes pre-installed on the new phone. This new version of iOS delivers a bunch of new features, including the ability to delete pre-installed apps (hurrah!), an upgraded Siri, more useful lock screen, better photo and music organisation and an improved Maps app among others. Oh, and there's expanded 3D Touch functionality too. Again, none of the improvements are groundbreaking, but they all come together nicely to subtly improve the iPhone experience.

Price-wise the new iPhone 7 starts at £599 for the 32GB version, which isn't crazy considering its rivals. However, as soon as you start moving up storage space-wise – or if you just want the Jet Black colour scheme – things suddenly start to get a little eye-watering. The 128GB model retails for £699, while the 256GB model rings in at a princely £799. Once again then you will be paying top dollar to land the new iPhone, however the quality and the desirability of the product once more goes along way to justifying this.

#### MAKE MINE A PLUS, PLEASE?

Like before, the iPhone 7 comes in two variants – the standard 7 and the 7 Plus, the latter having a dual camera and 5.5-inch screen

## T3 Says...

# The iPhone 7 and Watch series 2 are fantastic upgrades with slick features

ROB CARNEY, EDITOR

### Beautiful iteration

And that desirability for many, we are guessing, will be almost as important as the various refinements Apple has made with the iPhone 7. The iPhone 7 proves that Apple, while maybe falling more into iterative release patterns than flat out innovations, still does one thing better than any other smartphone manufacturer. Apple explains why its products are desirable better than anyone. Apple knows its products are damn good, explains why they are good very, very well and, from our experience with the iPhone 7, has also taken on board what its consumers have been asking for improvements-wise.

A myriad of hardware and software improvements, as well as core design refinement, have therefore made the iPhone 7 a thing of iterative beauty. If you can get past the lack of a headphone jack, it's an excellent update.

### Watch Series 2

And there was another announcement at the same time as the iPhone 7 – the next iteration of the Apple Watch. Apple Watch Series 2 adds a host of new features to the smartwatch, catapulting it into a top-quality fitness device. The first of these is water resistance down to 50 metres. This means you can now swim in the watch. An ingenious feature is that the speaker will spit any water out of the watch when you're done swimming. The other big fitness draw is built-in GPS. This brings accurate pace and distance tracking to the Apple Watch.

The screen is twice as bright as the previous version, and Series 2 is powered by Apple's new S2 chip, which the company claims makes the Watch up to 50 per cent faster.

And of course the Series 2 features watchOS 3, the company's new smartwatch operating system. watchOS 3 makes the Apple Watch a much slicker affair, and ups the game on the user experience – we'll put it out there, this is the best smartwatch OS bar none.

There are a few new models of note, including a collaboration with Nike (pictured left) called the Series 2 Nike+ (which at £369, offers a perforated strap, a pre-installed Nike Run Club app and some exclusive faces) and a new Edition, er, edition of the watch. The latter is now in ceramic white (gone are the hideously expensive gold options) and will set you back £1,249 for the 38mm option and £1,299 for the 42mm case.

What's more, you can also buy an updated Apple Watch Series 1, which now features a faster processor.

So there you have it, the latest iterations of the iPhone and Apple Watch. Both offer more power, a better OS and some great features for fitness. And both are well worth testing out.

**Hype**ometer

## Philips 55901F

£3,000, philips.co.uk

**So, what makes Philips' first OLED TV a big deal?**

Well, for starters, it's the only OLED screen that packs Ambilight – and it looks like a match made in high-end heaven. This is a three-sided Ambilight television, which is to say it has LED lighting strips left, right and across the top. Imagine high-contrast, colour-rich images, offset against a wall of multicoloured light.

I'm imagining it – that does sound rather fancy...

And then there's the picture: Philips has a long history of ground-breaking image processing, and it's gone to town here to enhance detail and motion resolution. Micro Dimming Perfect tech is used to optimise contrast, while a Perfect Pixel Ultra HD engine enables the system to monitor and adjust each individual pixel for sharpness and brightness. OLED televisions always look great with both HD and 4K, but Philips has thrown in Ultra Resolution tech for extra upscaling finesse.

I like the look of that aluminium integrated soundbar, too.

With good reason. There's 30W of amplification on board to drive six front-facing speakers. There's also a backfiring Triple Ring bass speaker for dropping deep notes when needed.

Sold! So when can I splash the cash? The 55901F goes on sale in November.

1 2 3 4 5 6 7 8 → 9 10

## Sony PlayStation Pro

£399/£349, playstation.com

**Hey, where's my PlayStation Neo?**  
You're looking at it. Maybe. The PlayStation Pro is widely thought to have previously been called the Neo, but we reckon the name Pro better represents some of the more powerful features this sleek-looking console is packing.

**Oh yeah? What are they?**  
The Pro has a bigger internal hard drive [1TB] than the standard PS4, along with twice the GPU power, so it can drive games at 4K res. Also, when you're playing a game with PS4 Pro features, the Share button on the DualShock 4 controller can generate higher-res gameplay clips and screenshots compared to the standard PS4. You can also broadcast gameplay at higher settings.

**What about movies?**  
The Pro is HDR-capable but can't play Ultra 4K Blu-rays. The Blu-ray Disc Player app, however, supports upscaling of DVDs and Blu-rays, and 4K media streaming from apps like Netflix falls under the Pro's remit.

**Will it play my PS4 games?**  
Aye! You can also copy your games, screenshots and saved data, etc, from your PS4 to the Pro using an ethernet cable.

**What about VR?**  
The Pro is built to handle the PlayStation VR, just like the standard PS4. Sony reckons the Pro's enhanced processing power supports higher-quality games, graphics and smoother framerates.

**Cool. When is it coming out?**  
The Sony PlayStation Pro is available from 10 November.

## Canon EOS 5D Mk IV

£3,599, [canon.co.uk](http://canon.co.uk)

**What a fine-looking beast this is!**  
Yes, the Canon EOS 5D Mk IV is perhaps the ultimate 'prosumer' camera available right now. It's powerful enough for professional snappers, but usable by enthusiastic amateurs and intelligent enough to help even complete duffers take decent pics.

**It's a little on the pricey side, mind.**  
**Does it justify that?**  
We reckon so. Not only does the Canon 5D boast an all-new, full-frame CMOS sensor, it then scrubs and primpes the images it takes with not one but two processing chips.

**And for its next trick?**  
Thanks to the new Dual Pixel RAW shooting format (alongside your standard JPEG and RAW), you can actually make small adjustments to the focus of your photos after you've taken them. It won't rescue completely hopeless efforts, but it can transform good pictures into perfect ones.

**Isn't it superlatively complicated to use, though?**  
Well... Yes, admittedly it has a huge and initially baffling selection of preset and user-adaptable dials, knobs and buttons. However, it also, for the first time on this class of Canon, has touchscreen focus control, like on your smartphone. So you can do everything from instantly zeroing in on a photo subject to doing a Hollywood-grade pull focus with your finger when shooting video.

**Video, you say?**  
Yup, with resolution up to 4K.  
Again, that's a first for the 5D range.

→ 9 ←  
1 2 3 4 5 6 7 8 9 10

Hypeometer

### BIG PICTURES

The 30.4MP full-frame CMOS sensor also creates 4K video for the first time on this range, at up to 30fps

### Vital stats

32GB  
There's plenty of built-in storage for HD videos

720p  
The max resolution of the Disco's live video feed

1,150mm  
This Parrot's huge wingspan helps it to glide smoothly

## Parrot Disco FPV

£1,149, [parrot.com](http://parrot.com)

Is it a bird? Is it a plane? Actually, it's more like a drone with wings. You're probably familiar with the Disco's four-prop sibling, the Parrot Bebop. The Disco, on the other hand, is an agile, fixed-wing, single-prop drone with a huge wingspan and bags of potential for shooting amazing videos.

Rad! And what are those funny-looking goggles for? The Disco package includes Parrot's new first-person-view Cockpit glasses for complete immersion in every flight. Load up Parrot's FreeFlight Pro app on your smartphone, insert your smartphone into the glasses and you'll see everything that Disco's front-facing, stabilised 1080p camera sees. Test the limits of this bird's 50mph top speed and it'll feel like you're piloting a real plane, minus the g-force.

That's amazing. It must eat batteries, though?  
No way. On a single charge, the Disco delivers a mind-boggling 45 minutes in the air. That's half a footie match. Impressive stuff.

I crashed my mate's drone. Is the Disco easy to fly?  
A dedicated take-off and landing button on the new Skycontroller 2 means you'll have no trouble getting airborne, plus anti-stall technology ensures stable flights and footage. Just watch out for trees, as there are no obstacle-avoidance sensors – yet!

I'll give it a shot. When can I get my hands on one?  
The Parrot Disco FPV is available to buy now.

# Lenovo Yoga Book

From £429.99, lenovo.com/uk

I've told you before, T3, I don't do bendy. Relax, El Stiffo. The only yoga you'll be doing with Lenovo's new two-in-one tablet is moving it from one position (mode) into another. There are four modes in all, thanks to a 360-degree hinge.

**Good.** Now tell me more. Available in gunmetal grey or champagne gold, the Yoga Book is a genuine piece of eye candy armed with some powerful features.

It runs Android or Windows (your choice), has a capacitive-touch bottom half (the Create Pad), an on-demand keyboard and a stylus.

Wait – what was that about an on-demand keyboard? Open the Yoga Book in Type Mode and the Halo keyboard will light up. There are no 'keys', just a smooth-touch surface. A haptic-feedback affair with built-in shortcuts, the keyboard will auto-complete and correct your words as you type.

**Interesting.** And the stylus? The Real Pen can detect 2,048 levels of pressure – great for drawing. When the keyboard is turned off and you're using the Yoga Book in Create Mode, the Real Pen will help you to write or draw as you would on paper.

**That's cool,** but what about when I want some playtime? The Yoga Book has you covered with its bright, 10.1-inch Full HD display and Dolby Atmos speakers.

Simply transform it into Watch Mode to sit back and devour your favourite film or TV show.

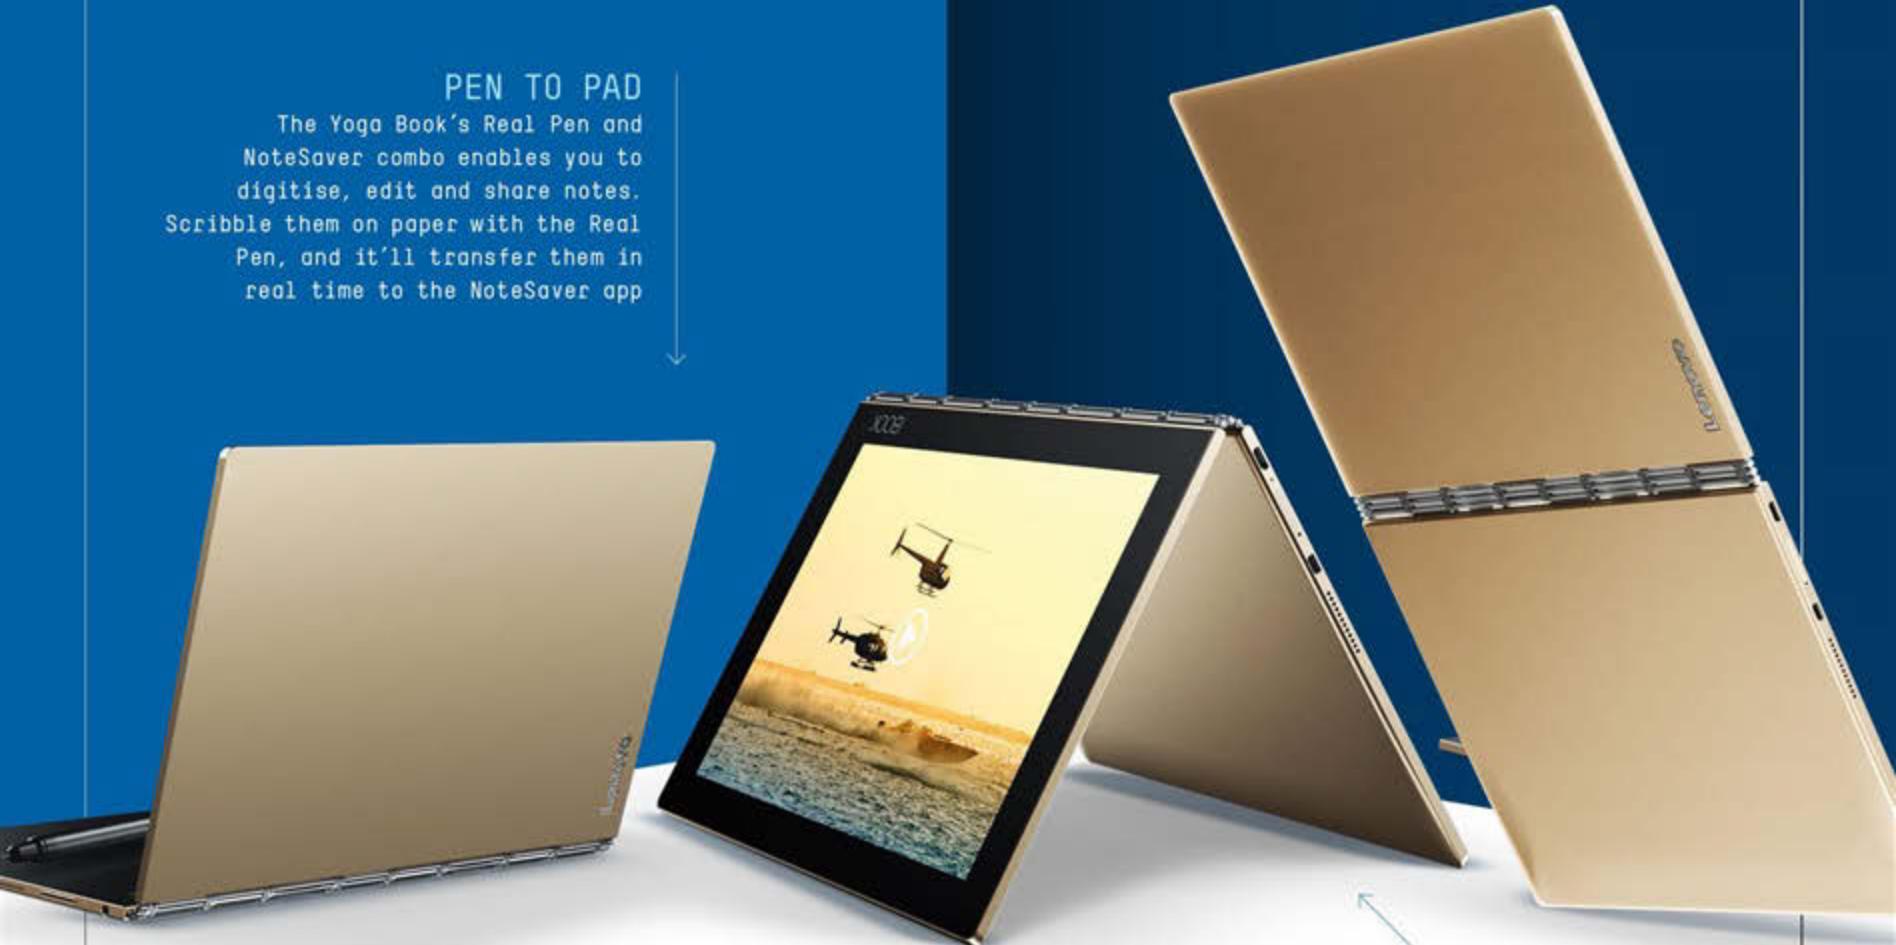

**Sweet!** When can I hit the mat? Groan. The Lenovo Yoga Book is available now.

## PEN TO PAD

The Yoga Book's Real Pen and NoteSaver combo enables you to digitise, edit and share notes. Scribble them on paper with the Real Pen, and it'll transfer them in real time to the NoteSaver app

## Vital stats

**10.1 inches**

The size of the Yoga Book's Full HD display

**Two**

The number of on-board cameras: 8MP rear, 2MP front

**64GB**

The internal memory, with a slot for microSD cards up to 128GB

**Five**

The number of included apps, including ArtRage (Lite) and Office Mobile Word

## SKINNY STRONG

The magnesium-alloy Yoga Book measures just 4.5mm thin when open, weighs 690g and can run for up to 12 hours on a full charge.

It's also Intel Atom-powered to help you get more done, faster

WHEN A CHILDREN'S HIGHCHAIR AS STYLISH AND VERSATILE AS THE iCANDY MiCHAIR IS LAUNCHED, IT'S TIME TO...

# SIT UP

**Having a child doesn't have to mean compromising your home's style – especially now that iCandy has launched the MiChair, a stunningly designed and versatile highchair that's tailor-made to meet the needs of the modern family.**

Expertly crafted from sustainable materials, the MiChair delivers a universal solution to all of your little one's seating needs – from birth upwards. When they're a baby, you can dock the optional MiChair Pod baby bouncer atop the main seat to harmonise your child's eye level with your own – vital for their early development.

As they get a little older, you can remove the Pod, leaving them with their own stylish seat – complete with safety crossbar and hygienic, dishwasher-friendly serving tray – that'll really make them feel like part of the family at mealtimes. And when they get older still, the MiChair can be easily transformed into a rocking chair that toddlers will love playing in.

What's more, the MiChair achieves all of this while maintaining a sleek, contemporary design that'll set tongues wagging – and not just your child's!

**THE iCANDY MiCHAIR AND POD ARE INSPIRED BY DESIGNER FURNITURE AND DESIGNED FOR MAXIMUM LONGEVITY**

The iCandy Pod can be docked on top of the MiChair, enabling vital eye contact between parent and child

Once baby gets older, you can convert the MiChair into a stylish chair, or even a rocking chair (pictured)

The optional MiChair Comfort Pack comprises a cushion and seat reducer that can be adjusted to suit various ages

Hygiene is a priority – the MiChair's plastic serving tray is easy-clean, dishwasher-safe and has no dirt traps

# STARTER DRONE PHOTOGRAPHY KIT

Shoot aerial video like a pro, and scout amazing locations, with our top tech picks

## THE READER

### Greg Simpson

→ T3 reader Greg picked up his first drone last year and now wants to shoot better footage, edit like a boss and equip himself to scout locations beyond the local park.

## THE EXPERT

### Chris Barnes

→ T3's drone expert has flown everything from autonomous hexacopters to 4K super-shooters. He loves venturing into the wild to discover cool new locations for his aerial epics.

## 01 DJI PHANTOM 4

There's little point in finding stunning locations if you're shooting them with a drone packing a half-baked camera. The Phantom 4's 4K shooter is mounted to an integrated 3-axis gimbal, and the drone itself is kept airborne via four brushless motors, ensuring your flybys are always smooth. If your piloting skills don't cut it, intelligent obstacle-avoidance tech and autonomous flight features such as Visual Tracking mean you'll nail the perfect shot every time.

£1,229, [dji.com](http://dji.com)

## 02 MANFROTTO AVIATOR D1

Trekking between locations with all your gear is no fun. This dedicated drone backpack lightens your load with a bespoke internal compartment, within which you can stow your DJI Phantom 4. Once the propellers are fitted, you can attach your drone to the outside of the bag so that it's ready to fly when you are. The pack also has compartments for essentials like spare batteries, and there's even a fold-out rain protector.

£160, [manfrotto.co.uk](http://manfrotto.co.uk)

## 03 APPLE MACBOOK PRO

Load Final Cut Pro X onto this 15-inch portable powerhouse and chop your fabulous 4k aerial footage with ease, courtesy of the quad-core i7 processor and 16GB of memory. The combination of Intel Iris Pro Graphics and gorgeous Retina Display will make your footage look like it was shot by Peter Jackson himself.

From £1,599, [apple.com/uk](http://apple.com/uk)

## 04 BERGHAUS MEN'S EXPLORER ACTIVE GTX

Berghaus's new, trainer-style Explorer shoe features a waterproof Gore-Tex membrane to help your clammy toes breathe during a long day of walking and flying, while a Vibram Opti-Stud multi-active outsole delivers superb grip and shock absorption for when you're clinging to that mountaintop.

£115, [berghaus.com](http://berghaus.com)

## 05 GARMIN OREGON 750T

Relying on memory alone to retrace your steps to a secret flying location is a recipe for disaster. Happily, Garmin's latest handheld GPS features an enhanced antenna for improved reception, and a compass with accelerometer and barometric-altimeter sensors so you'll never get lost. And if you find a spot you want to shoot at a later date, snap it via the 8MP camera and the Garmin will geotag the location. Bluetooth connectivity means you're never far from your notifications, either.

£470, [garmin.com](http://garmin.com)

## 06 FAT SHARK DOMINATOR V3

Strap on these first-person-view gogs, connect them to your drone controller with an HDMI cable, and immerse yourself in the 720p live feed from your drone's camera – it's the closest you'll ever get to flying. The Dominators will give you improved control over your drone, resulting in amazing footage. Plus, you'll look like you're from the future!

£350, [fatshark.com](http://fatshark.com)

05

## COME RAIN OR SHINE

Not only does this Garmin have an IPX7 water-resistance rating, enabling it to withstand a 30-minute submersion in one metre of water, but the three-inch transreflective colour touchscreen is readable in the brightest sunlight

## LEADER OF THE PACKS

The Aviator D1's modular system means you can change the architecture of the main compartment. Don't fancy flying today? Ditch the drone and pack your DSLR instead

02

01

#### AT YOUR OWN PACE

Beginner pilots can control maximum speed, altitude and distance within the DJI Go app, enabling them to learn the ropes safely. Feeling cocky? Switch to Sport Mode and the capable Phantom 4 will cover 20 metres per second. Beast!

06

#### FOR YOUR EYES ONLY

First-person-view goggles like these Fat Sharks are an essential tool in drone racing, where pilots navigate insane courses at speeds of 60mph+. Brit racer Luke Bannister won the Dubai World Drone Prix in March, pocketing £190k for him and his team. He's 15. Sickening

04

#### SATISFACTION GUARANTEED

Berghaus products are so tough, they all come with a lifetime guarantee. The Explorers come in black with either red, green or blue trim. Thankfully, they're just stylish enough to wear with jeans, too

#### GONE IN A FLASH

You'll quickly chew through the Mac's internal flash storage if you're editing lots of video, so it's worth investing in an external drive like ADATA's ultra-slim 2TB HC660 (£105)

03

### T3 Says...

A few upgrades to your drone set-up will take your aerial photography to epic new heights

CHRIS BARNES

# → GETTING SHIRTY

A good smart-casual shirt will see you from work to bar – and even through Sunday brunch with the in-laws. Here are five stunners to get you started

01

02

03

04

05

### 01 FINISTERRE ELLIOT

→ Any man who understands the brilliance of a capsule wardrobe will appreciate Finisterre's versatile Elliot shirt. Layer it over a fresh white tee or wear it beneath a snug crew neck jumper. £75, [finisterre.com](http://finisterre.com)

### 02 CHEAP MONDAY AVOID POPLIN

→ Every guy should own a crisp white shirt, and this button-up will help you look sharp without feeling stuffy. Made from soft, pure cotton, and designed with tonal four-hole buttons, the regular-fit Avoid Poplin shirt flatters a range of body shapes and skin tones. £50, [cheapmonday.com](http://cheapmonday.com)

### 03 SAMSOE & SAMSOE LIAM OXFORD

→ Inject some Scandi style into your wardrobe with this simple yet striking shirt. Available in salt and pepper (shown) or blue, the full-cotton Liam

Oxford plays nicely with dark denim. Roll up the sleeves for a weekend look, or button at the cuffs for a dapper vibe. £70, [johnlewis.com](http://johnlewis.com)

### 04 FOLK SLIM-FIT PLAID COTTON

→ Designed exclusively for Mr Porter, this classic plaid shirt has a quirky, contrasting check fabric lining the inside – reveal it by rolling up the cuffs. Masculine and rugged, the shirt looks awesome when paired with a lightweight bomber jacket and a pair of hi-tops. £135, [mrporter.com](http://mrporter.com)

### 05 VOLCOM TELLURIUM

→ Volcom's polyester and wool shirt will keep you warm on those cold walks to the pub. There are double patch pockets on the chest, and a Volcom label, edged with reflective black piping, at the back. Wear it with a pair of chinos to get that smart skater look. £85, [volcom.co.uk](http://volcom.co.uk)

## OPINION

# Duncan Bell is into Apple

**This month has been both a triumph and a disaster for The World's Biggest Brand**

**A**re you one of those people who, upon reading any article about Apple that doesn't slag them off mightily, rushes to social media to ask, "How much did Apple pay you for this?!"

Well, you'll be pleased to know that I can tell you exactly how much. In my case: nothing. Isn't it unfair?

Every time I pen a feature called something like, "New iPhone looks like it'll be the best phone you can get, until the next good one comes out," I send off my invoice to Apple (£5,000 and a gold Apple Watch, payable within 28 days).

Every single time, without fail, they ignore it. AND they don't return my calls when I ring to complain.

Then, when I turn up at their offices holding a big placard saying, "Apple, pay me what you owe me for writing sycophantic things about you," while shouting abuse through a megaphone at anyone coming out of their building, they call the police!

This is why people hate Apple. It's their sheer money-grabbing unfairness, and their high-handed, control-freak attitude to being shouted at through a megaphone, on the street, by me.

## Get to the point, please

Using Apple's products – being a 'fan' of them, if you will – can feel like being in love with someone who's very beautiful, but also an axe murderer. And I feel like last month was a mixed one for The Word's Biggest Brand™.

We'll be able to judge how well the iPhone 7 handsets have really done in a year's time, but it was no surprise to me that the 7 Plus and certain types of 7 sold out on pre-order – an unusual occurrence in recent times. The new iPhones absolutely target Apple's hardcore fanbase with their design.

That's why the company emphasised the black ones at its launch event. Nothing is more classically stylish and

appealing to people who are into design than black things. Steve Jobs, with his black polo necks and black smartphones, got that.

In recent years, Apple's not even had a black handset. The nearest thing was 'Space Grey,' which is a feeble, watered down version of black. The emphasis has been on colours such as rose gold, in a stab at following fashion and trying to dominate Middle and Far Eastern markets.

People in the East like everything to be made of gold, because it brings good luck, or something. If you go to supermarkets in, say, Doha, you'll find that everything from trousers to Twiglets are gold coloured. Bathroom fittings too. Yes, over there, even the showers are golden. You couldn't make it up.

But gold is gaudy. It's not stylish. Black is stylish. And you know what's even more stylish than black? Jet Black.

That's the new type of black Apple

## The inevitable and instant result was that my phone crashed, burned, bricked, died

invented especially for the iPhone 7. It's a black so noir-ish, it's like a black diamond, at the bottom of a well, at night, during a lunar eclipse.

So anyway, I lap all this kind of crap up, so I was absolutely knocked out by the iPhone 7. I also loved how Apple not only greatly improved the camera, but also how they'd addressed the complaint that some people had, that the camera lens protrudes from the back of the iPhone, instead of being flush. Rather than removing

the protuberance, Apple actually made it more noticeable... But also more attractive. It made it into a feature!

Problem was, the inky blackness and the beautiful, sports-car curve of the camera-lens bump got me so hot under the collar, I really did momentarily become a genuine Apple 'fan boy'. A Fapple, if you will.

As a result, I broke the hard-learned habit of recent years and decided to install iOS 10 – which is also packed with neat little features and design flourishes – on my ancient and oh-so-unworthy iPhone 6s, as soon as it became available. Woah boy.

The inevitable and instant result was that my phone crashed, burned, bricked, died. And I simply cannot exist any more without a phone – I'm like a Dalek without its casing, plus I immediately get lost without Google Maps – so I very nearly had a nervous breakdown trying to restore it.

At least this meant that equilibrium was restored. I looked at my lifeless phone, and my pile of unpaid invoices to Apple, and realised that I actually hated the brand and all of its deeds. Although, give it another month and I'll probably have swung the other way again. Such is the rollercoaster of tech.
